

## Support to Cadets

**Landmarc has become key in the provision of suitable training sites to ensure smooth and successful Cadet Events, with a constant vigilance on the condition and safety of facilities.**

150 years of The Army Cadet Force (ACF) has made it one of the longest running, largest and most successful youth organisations in the UK. The success of the Cadets is dependent on the support of people and importantly the availability of suitable environments for their varied activities.

### The challenge

All Defence training estate facilities are frequently used for military training, which means accommodating the use of thousands of soldiers, explosive materials and heavy vehicles. The Landmarc challenge is to ensure that the sites also remain appropriate for cadet use.

### The solution

Through our maintenance and control process we ensure that the environment remains suitable for cadets to use with safety and confidence.

Not only do we need to provide a safe environment but also a diverse one. The success of cadet training

is dependent on the ability to meet the needs of numerous activities including: sailing, kayaking, range shooting, orienteering, mountain climbing, rock climbing and archery.

We also assist with the maintenance of Cadet specific buildings and facilities that are maintained solely for the use of Cadets and other youth organisations.

### The benefits

For cadet use we need to make certain all facilities and equipment are checked for safety and condition prior to a handover, we continue to ensure a satisfactory working condition throughout the duration of the cadets stay on our managed sites.

- Only through our careful management of the facilities can the cadets achieve the full scope of their training aims.
- The management of land in preparation for cadet training events is valuable in ensuring the on-going maintenance of sites across the country.

The work we do ensures smooth and successful cadet events, with a constant vigilance on the condition and safety of facilities.
